

# Exhibit 8A

## Shortage Versus Overflow

### Shortage

Weekly Paycheck	\$650
Weekly Bills & Debt	\$550
Weekly Living & Leisure	\$100

$$\$650 - \$550 = \$100$$

\$100 is not enough for Living & Leisure.

True shortages happen when the only expenses are necessary ones and earnings either don't cover them or don't provide enough cushion to have fun money.

The System can't start because there is a Shortage.

### Overflow

Weekly Paycheck	\$850
Weekly Bills & Debt	\$550
Weekly Spending	\$500

$$\$850 - \$550 = \$300 \text{ but spending is } \$500, \$200 \text{ more.}$$

Outflow is \$200 greater than inflow.

On paper, the System worked, but over time, Leisure items were added to the spending which increased the outflow.

The System can't run because there is an Overflow.
